- Reading

Languages

- Portuguese
- English

I have 7 years of experience in the development area. During that time I had contact with several technologies and colleagues who taught and inspired me to be a great professional, in addition to learning how e-commerce works in general.

I have a degree in Systems Information and I have experience in Front-End development using technologies such as JavaScript, HTML, CSS, React and Next.js. Also, I have experience in some e-commerce platforms like Shopify and Magento.

I am interested in learning new technologies, studying and putting into practice all the knowledge I have acquired over the years to be able to meet requirements and add value to society.

Work experience

Front-End Developer McFadyen Digital, Remote

May 2017 - May 2025

While at McFadyen, I worked on a lot of e-commerce projects and was involved in a multitude of user interface builds, using modern technologies, like React, Next.js, and Magento, to build these scalable and reusable solutions. I worked very closely with cross-functional teams to ensure that the projects had high performance and usability in various platforms to create at great user experience.

Some of the notable projects I was part of include:

ABB - The front-end lead for a B2B e-commerce offering on a Magento platform. My role was to build scalable UI components and ensure cross-browser compatibility.

SUFS - Created a custom storefront with React and Next.js, which was integrated to a Magento backend. My position involved collaborating with designers and backend developers to create a fast, responsive, and easy to use interface.

Thoughtfull - I contributed to the development of an e-commerce offering using Shopify, where I implemented the custom theme and improved the site performance for an improved shopping experience.

BOOKSIO - I was a contributor on a Magento-lead online bookstore. I developed the front-end experience, working to improve page load speeds, build reusable UI modules, and to integrate third-party services.
